The Active Lives Survey: Children and Young People

gathers data on how children engage with sport and physical activity

Designed by Sport England, the Department for Education (DfE), the Department for Health (DfH), and the Department for Digital Culture Media and Sport (DCMS), its purpose is to gain a detailed insight into the current physical activity habits of the nation's children and young people (aged 5 to 16).

The survey collects data to present a comprehensive picture of children and young people's:

- Overall levels of activity both during the school day ('at school') and outside school
- Activity levels for a range of key demographic groups
- Chosen activities by age group
- Volunteering levels (supporting sport and physical activity)
- Associations between activity levels and measures of mental wellbeing, individual development and social and community development
- Attitudes towards sport and physical activity

For more information about the survey please visit [Sport England's website](#)

How much physical activity should children and young people do?

Activity levels for Children and young people are presented in three categories (for overall activity in the last week):

Active

(Chief Medical Officer guidelines)

An average of 60 minutes or more a day
(at least 420 mins over a week)

Fairly active

An average of 30-59 minutes a day

Less active

Less than an average of 30 minutes a day

Note: Only activity of at least moderate intensity is included

National update

Children's activity levels are rising but inactivity remains too high

The latest Active Lives Children and Young People Survey Report shows that 49.1% of children are meeting the Chief Medical Officers' guidelines of taking part in an average of 60 minutes or more of sport and physical activity every day.

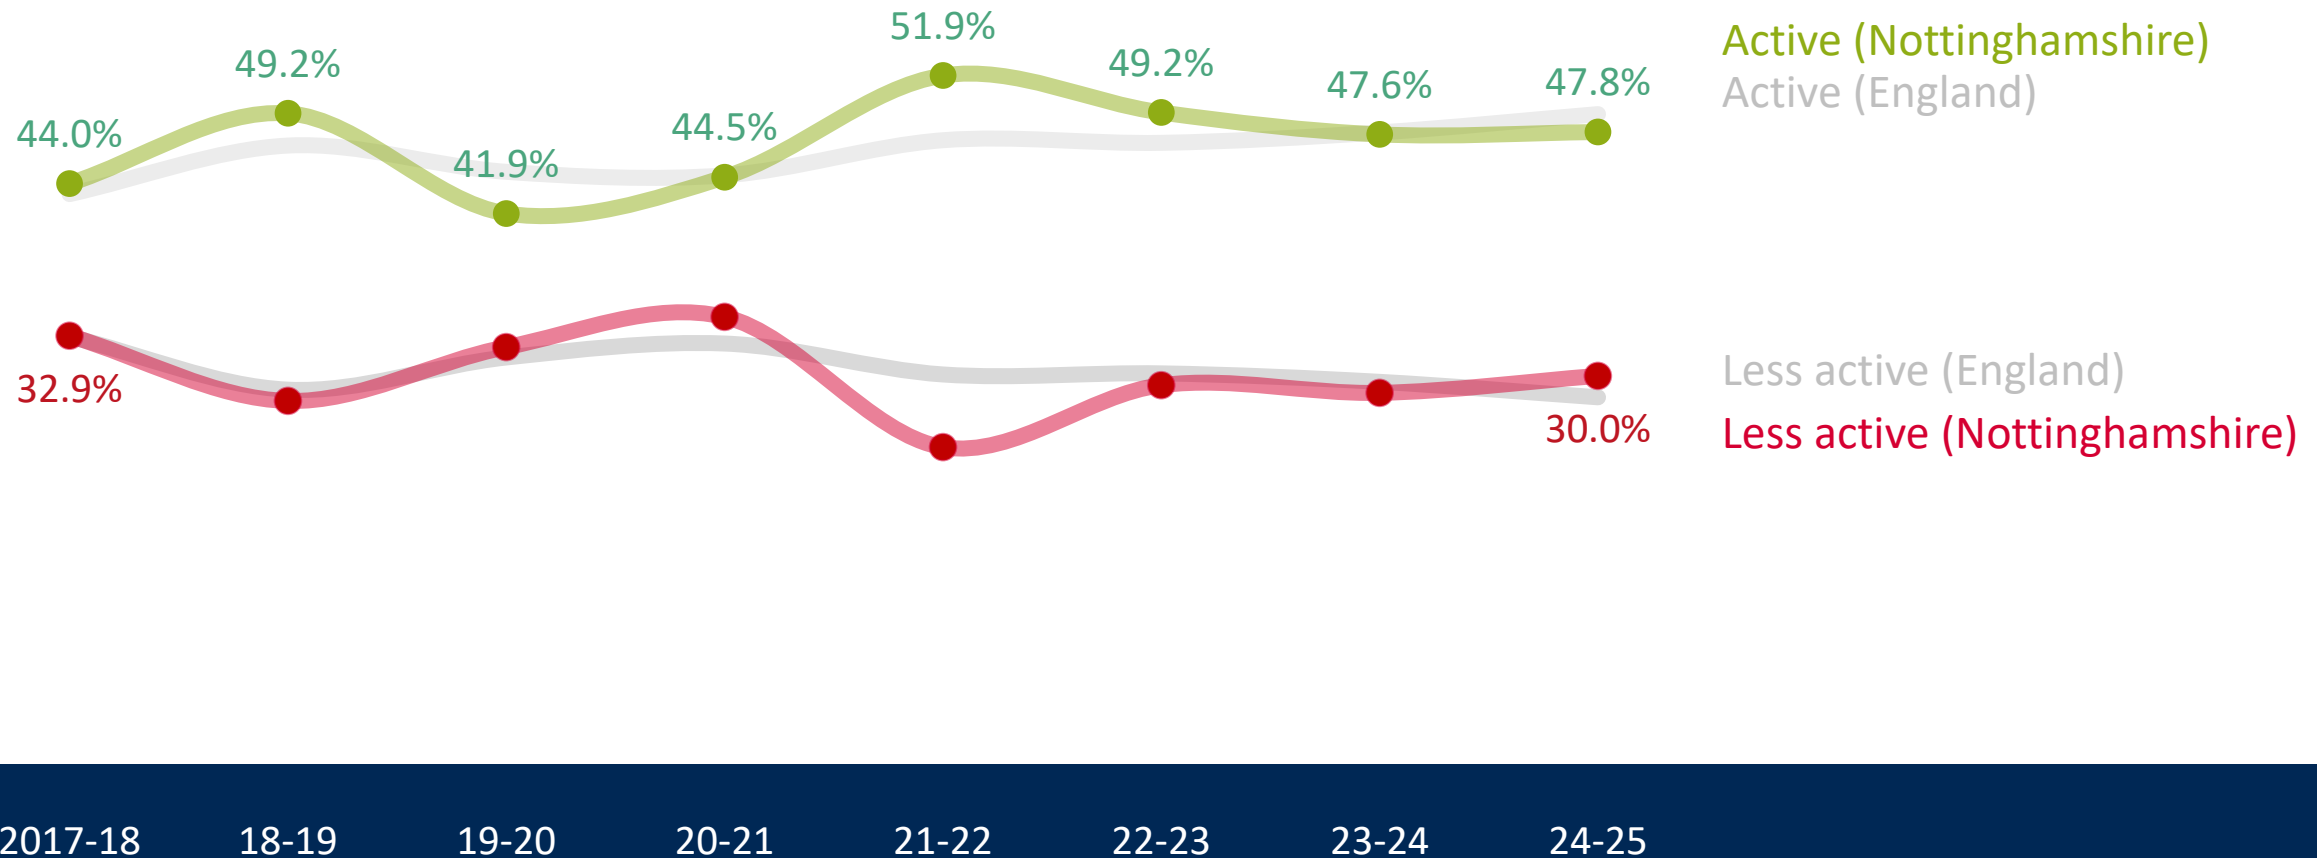

Significant inequalities remain in activity levels, with Black (41%) and Asian (43%) children and young people, and those from the least affluent families (45%), still less likely to play sport or be physically active than the average across all ethnicities and affluence groups. Girls (46%) are also less likely to be active than boys (52%), and the gender gap is widest between boys and girls from Asian (11.2%), Black (10.6%) and other (12.5%) ethnic groups.

With White British (51%) and White Other (53%) children's activity levels increasing at a faster rate, the gap by ethnic group has widened over the past 12 months.

Children and young people from the least affluent families are the least likely to be active, with only 45% meeting the CMO guidelines, compared to 58% of those from the most affluent families.

Whilst those from the most and mid-affluence families have seen increases over the last two years, those from the least affluent families have not, indicating inequalities have widened in the short term.

Physical activity for children and young people in Nottinghamshire has stabilized

Nottingham	-3.6%	No change	3.4%	No change
Rushcliffe	-0.5%	No change	2.9%	No change

In summary, over half of children and young people still do not meet the CMO guidelines and 3 in 10 are classed as less active

Data is for: Nottinghamshire

Active

- The latest 2024-25 data shows 47.8% of children and young people in Nottinghamshire are classed as active. The active rate is now higher (better) than the last 12 months.
- The active rate for Nottinghamshire is now 1.3pp worse than England (49.1%)

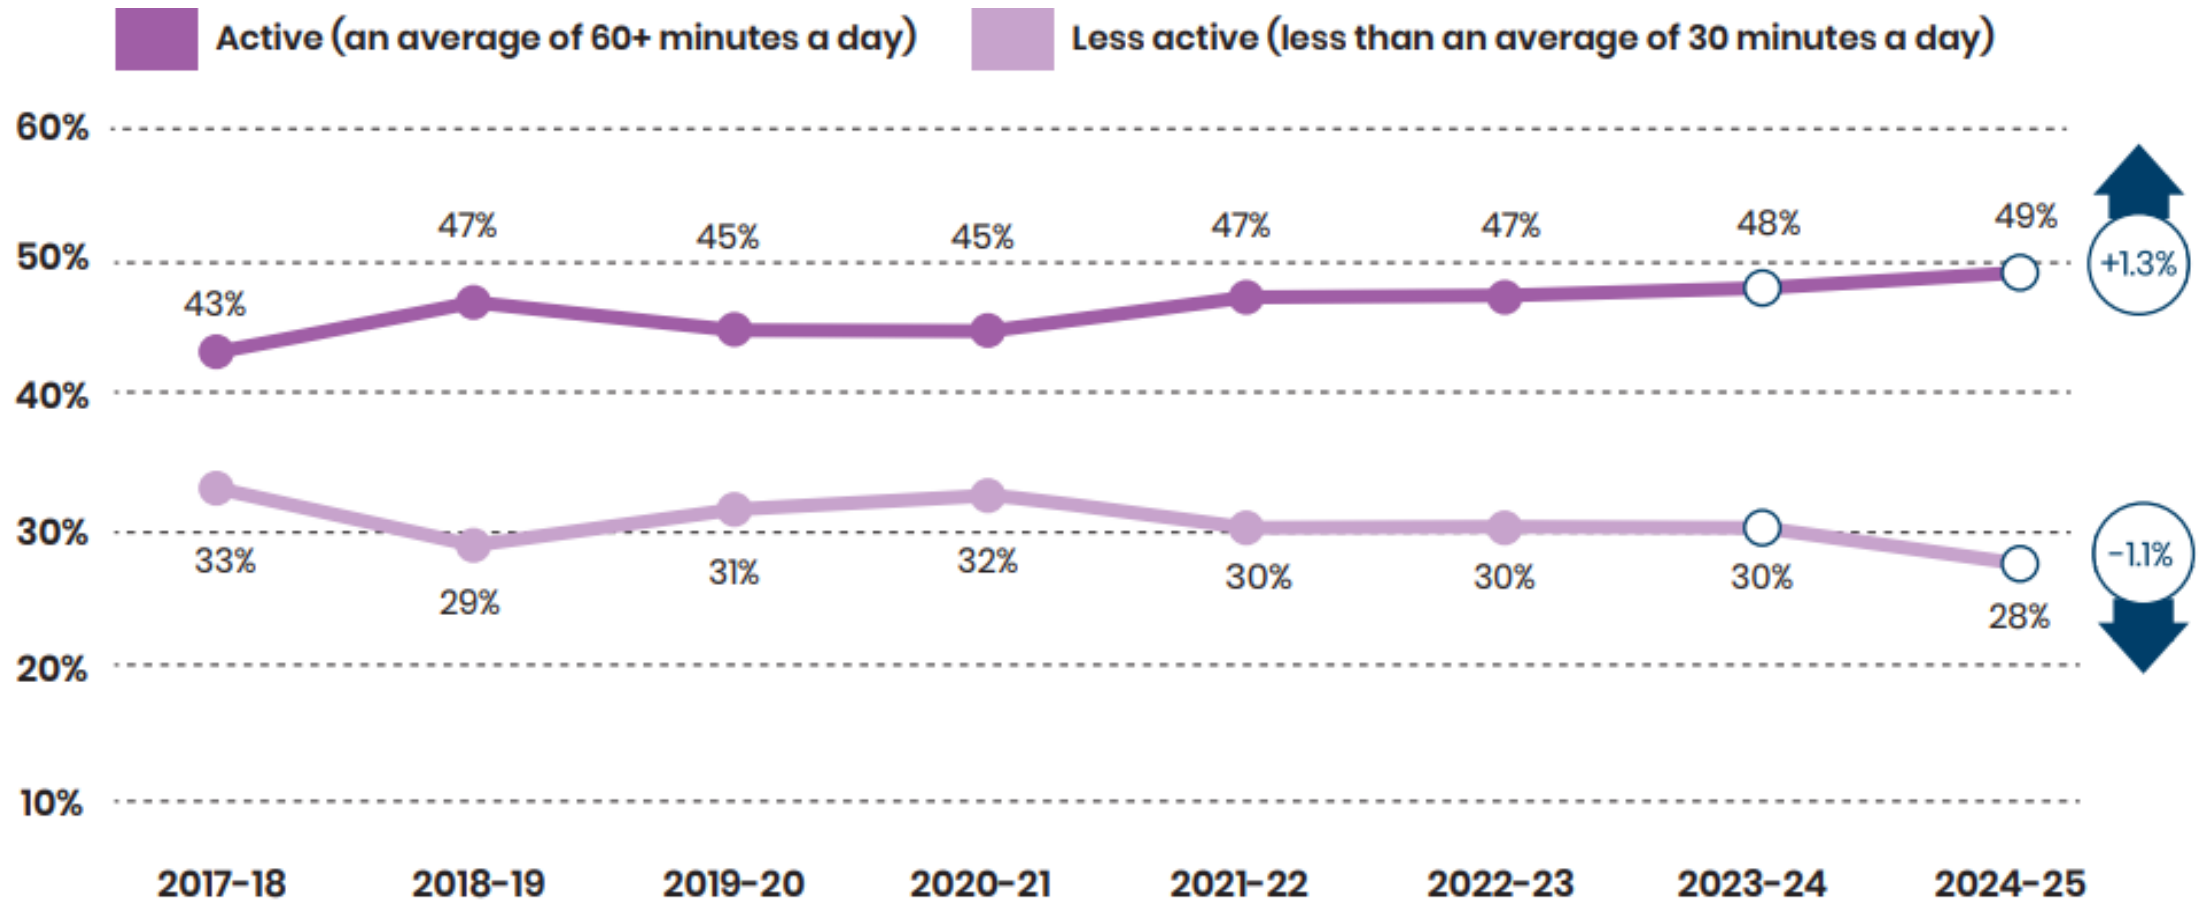

Less active

- The latest 2024-25 data shows 30.0% of children and young people in Nottinghamshire are classed as less active. This rate is higher (worse) than the last 12 months.
- Nottinghamshire figures are now 1.6pp worse than England (28.4%)

National Findings

Overall, activity levels have increased

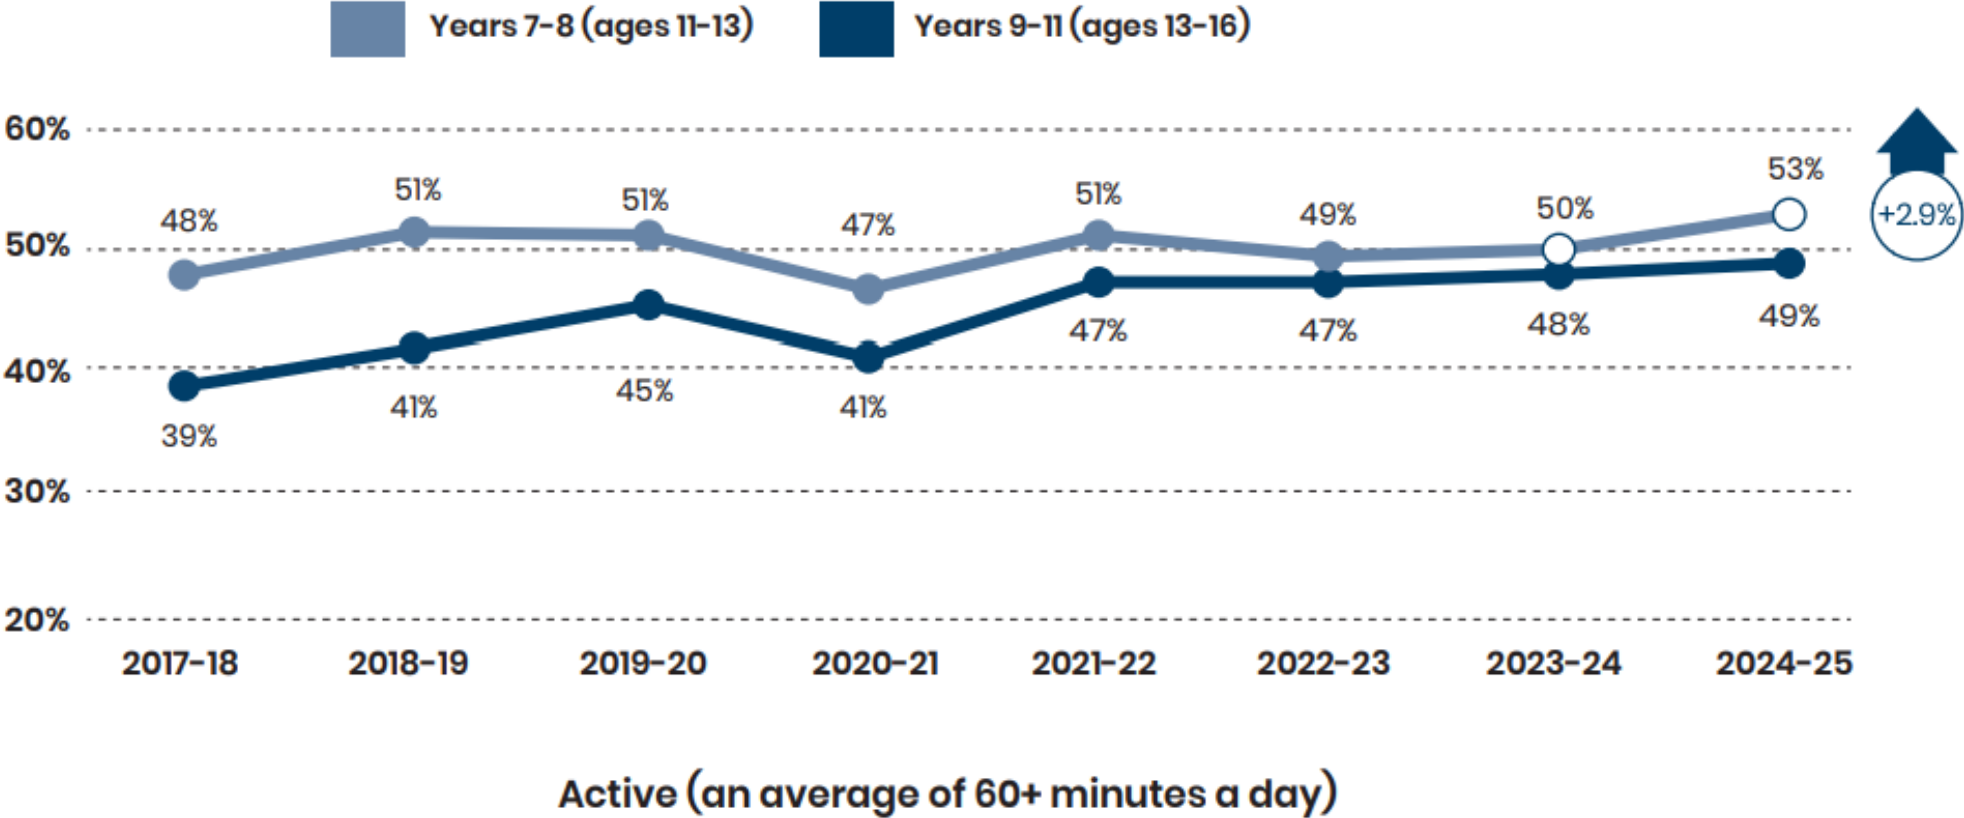

Activity levels among junior-age children continue to recover slowly

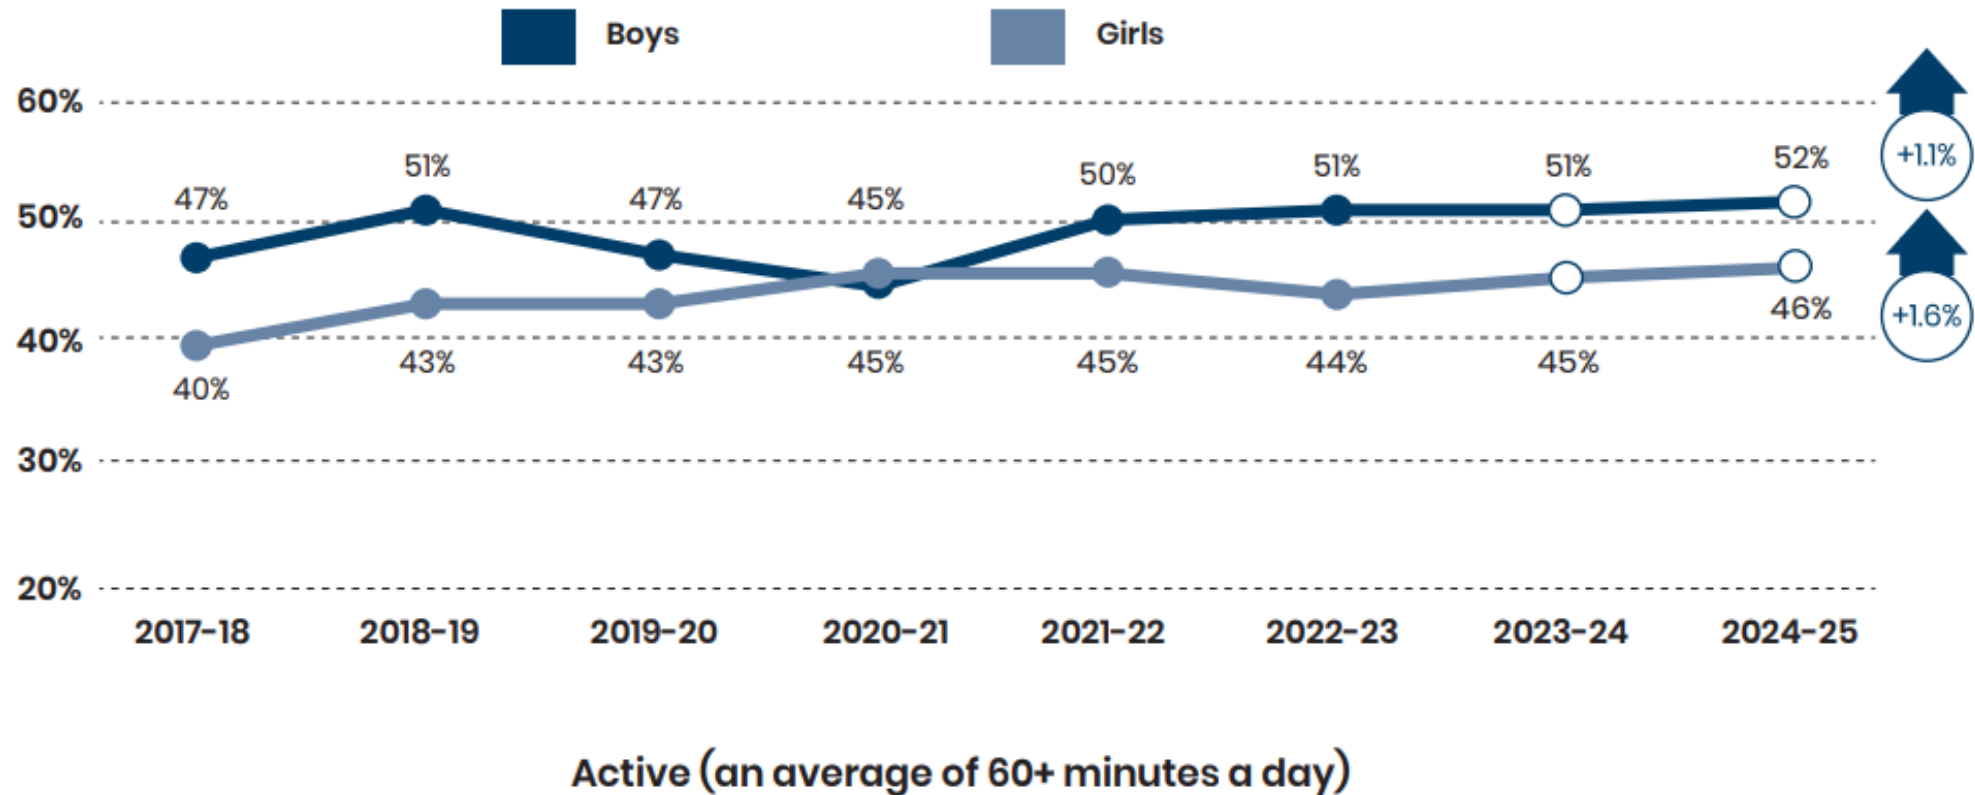

Active (an average of 60+ minutes a day)

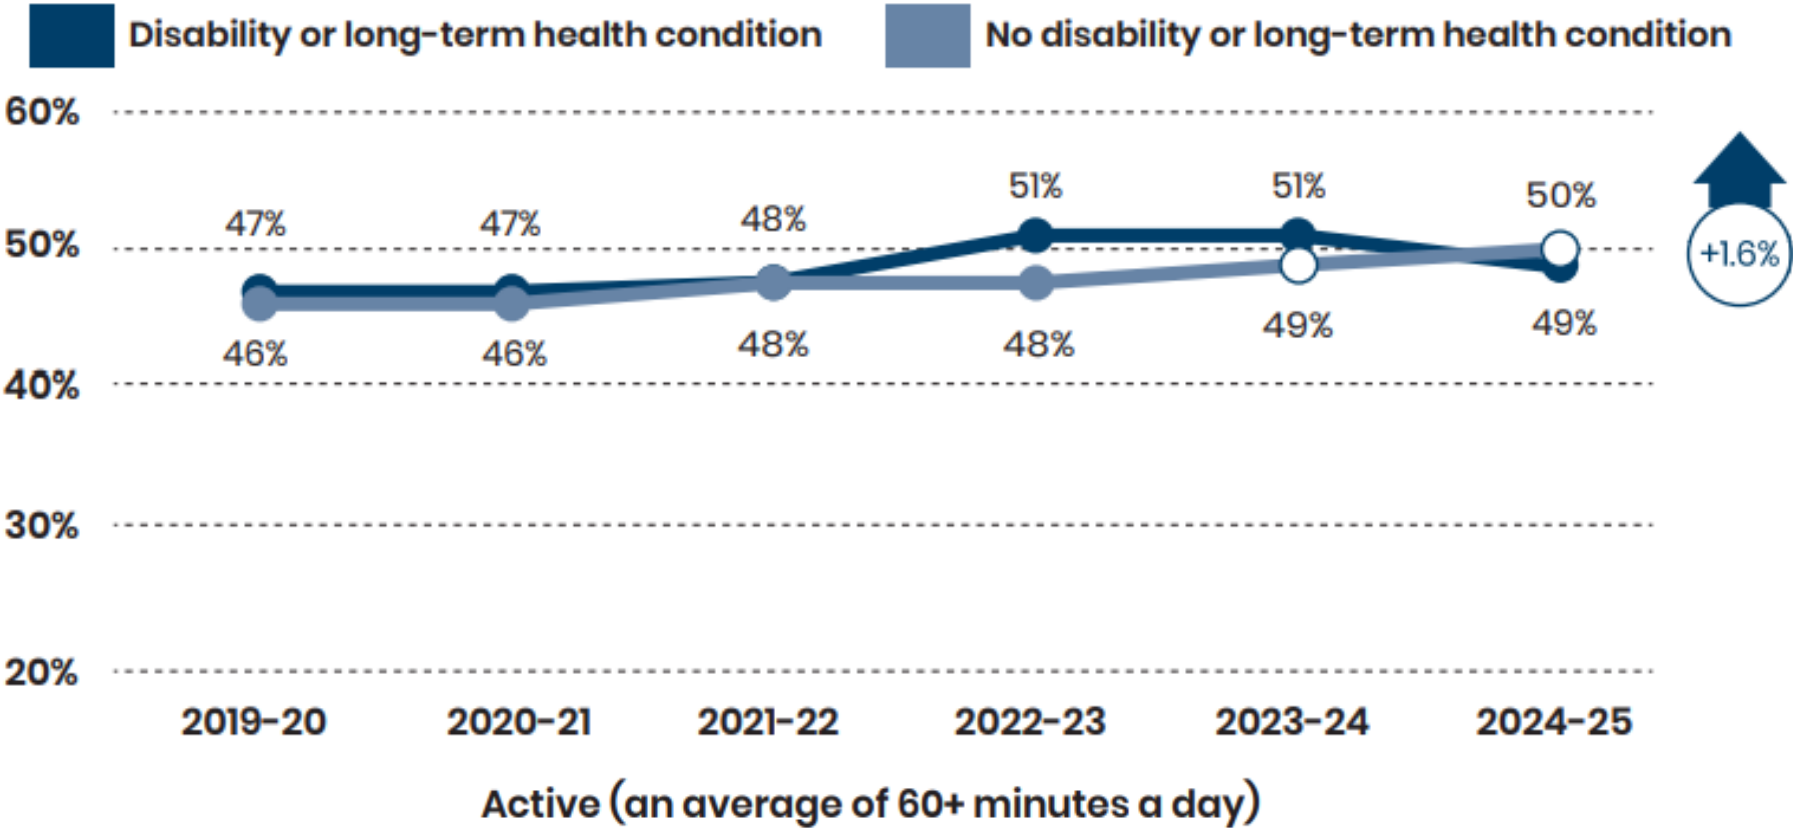

Activity levels are broadly unchanged over the last two years among secondary-age young people

Both boys and girls have seen activity levels increase over the last 12 months

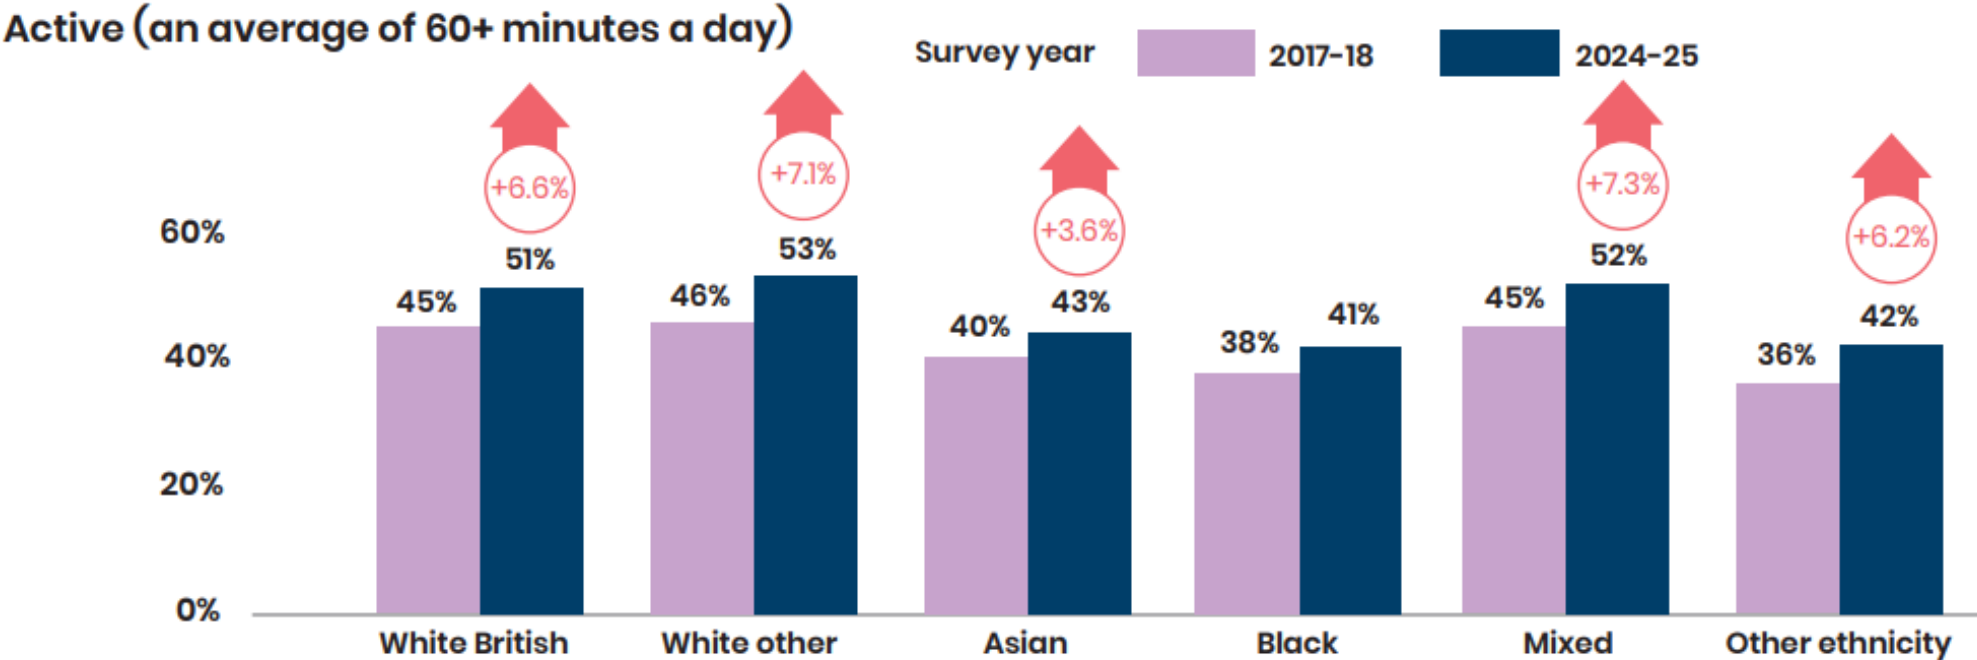

There is little difference in activity levels between children and young people with and without a disability or long-term health condition

The gap in activity levels by ethnic group has widened

 Arrows show change from seven years ago.
 No arrows indicates no statistically reportable change

Note: After White British, the largest ethnic groups within the child population are Asian (11%) and Mixed (7%), with White other (7%), Black (6%) and Other ethnic groups (1%) making up the remainder. As such, caution should be applied when looking at change for these groups, due to smaller sample sizes and therefore wider confidence intervals.

All affluence groups have seen activity levels increase over the longer term

Note: During the coronavirus pandemic, one of the components of the family affluence scale wasn't applicable. As such, comparable data is not available for that period. See the [definitions](#) page for more details.
